GO BACK

Use this handy calculator to determine your LiteSotne® needs for each project.

LiteStone TM is a wall coating for indoor and outdoor use consisting of stones with appearance and structure similar to that of natural stone,

How to use?

Index "Flat Stones", enter in the size of the wall hat you want to cover (exclude xindow openings) applicable, enter the height of the area to be overed in natural edge stones or comer stones. The calculator will subtract from the Ball stones sized upon your natural edge and/or corner equiraments.

The calculator will provide a finished shopping it of your stone and adhesive requirements.

Instead of the calculator, use this easy worksheet to determine the exact number of flats and corner you'll need.

5-172

How much flat stone do i need?

LiteStone ™ is a wall coating for indoor and outdoor use consisting of stones with appearance and structure similar to that of natural stone.

buy A boxes of flat stone.

How much corner do I need?

One box of corner stone or natural edge stone covers six linear feet. If you need to go around a corner, or if a wall ends abruptly and you need a natural finish on the edge, simply measure that length or height.

In the example below, the homeowner would need enough to cover eight linear feet, and would need to buy two boxes of corner stone and/or natural edge stone.

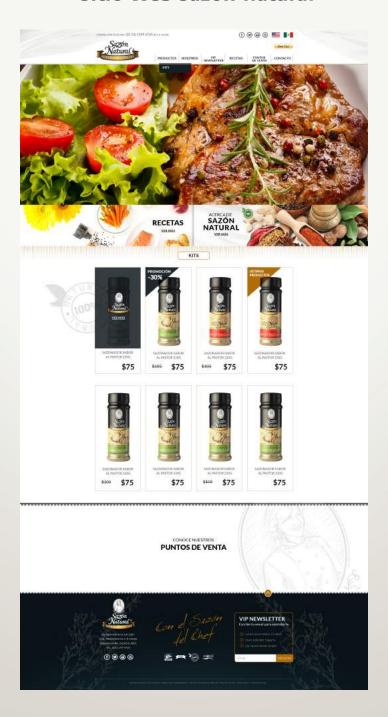

What tools do I need?

All you'll need to install Lite Stone is a putty knife to spread our pre-mixed adhesive and a hack saw. No special tools or mixing are needed. And for outdoors, just add gloves and caulk gun.
